

ScriptLogic® Exchange Management

Award Winning Solutions

ScriptLogic's Exchange Management Solutions provides administrators a comprehensive solution to help manage many of the day-to-day challenges related to your organization's messaging environment. Maintaining compliance through proper access controls, archiving capabilities, reporting, performance analysis and real-time alerting are all essential components to securing and better understanding how your organization uses e-mail, instant messages, mobile devices, etc. With ScriptLogic's Exchange Solutions, you can be assured that the proper tools are in place to increase security, reduce cost and improve the productivity of the workforce and preserve a well-managed, and always reliable messaging environment.

ScriptLogic Exchange Management Products

□ Security Explorer for Exchange

Security Explorer for Exchange is a powerful, graphical solution for real-time management of access controls and security in Exchange. This broad, real-time solution offers administrators the ability to manage, search, clone, backup, and recover permissions and security in Exchange. This solution provides consolidated management of mailbox and Active Directory permissions from one, simple to use interface.

□ Quest® Recovery Manager for Exchange

Quest Recovery Manager for Exchange rapidly and efficiently discovers and recovers business-critical Exchange data to aid with electronic investigations and individual end-user recovery needs. By restoring message-level items (including e-mails, appointments, tasks, contact and attachments) from regular Exchange backups this solution helps organizations reduce the cost of discovery and provide end-users with message-level data recovery.

□ Quest® MessageStats

Quest MessageStats is an Exchange reporting tool that gathers, analyzes and provides administrators a secure means to measure email usage, report on compliance adherence, defend SLA's, assess readiness for email migration and ensure that storage requirements are met.

□ Quest® Archive Manager

Archive Manager captures, indexes, searches and archives Exchange email messages and attachments. This solution also reduces Exchange storage costs, meets compliance demands and simplifies email quota management.

□ Quest® Spotlight on Messaging

Spotlight on Messaging optimizes the performance and availability of messaging environments and directs the resolution of operational issues to simplify administration, improve productivity and control costs.

□ Quest® Policy Authority for Unified Communications

Quest Policy Authority for Unified Communications protects organizations from attacks and prevents data leaks that can occur through Instant Messaging and other types of real-time communications, enabling IT departments to demonstrate compliance and to secure and protect their network.

□ Quest® Change Auditor for Exchange

Quest Change Auditor for Exchange proactively audits all activity, provides real-time alerts and tracks vital changes in-depth in your Exchange environment. Audit changes to non-owner and owner mailbox access, administrative groups, mailbox policies, public and private information stores, organizational changes, and more.
