

ACCESS GOVERNANCE IN WINDOWS ENVIRONMENTS

Reducing data security risk through access rights management

Product: 8MAN

8MAN improves your internal security by providing a transparent overview and full reporting of access rights on file servers, SharePoint and Active Directory. It allows the management of all administrative tasks, such as the creation and management of users, groups and directories. 8MAN facilitates the delegation of responsibilities to help desk users or data owners by allowing designated users to perform some administrative functions without requiring full admin rights. All of these features help keep your organization secure from the inside out.

Manufacturer: protected-networks.com

Protected-networks.com was founded in Berlin in early 2009 and develops integrated software solutions for access rights management in Windows environments. 8MAN improves internal data security by limiting access rights to a "need-to-know" basis and thereby prevents unauthorised access of sensitive data. Besides saving time and reducing cost, 8MAN also supports the adherence to various legal and compliance standards such as ISO 27001, PCI-DSS and SOX.

EFFICIENCY, SECURITY AND COMPLIANCE FROM A SINGLE SOURCE

Permission structures can be as complex as each individual organisation, which is why 8MAN provides accurate and intuitive views to visualise each relationship and grouping, regardless of company size, locations or industry sector.

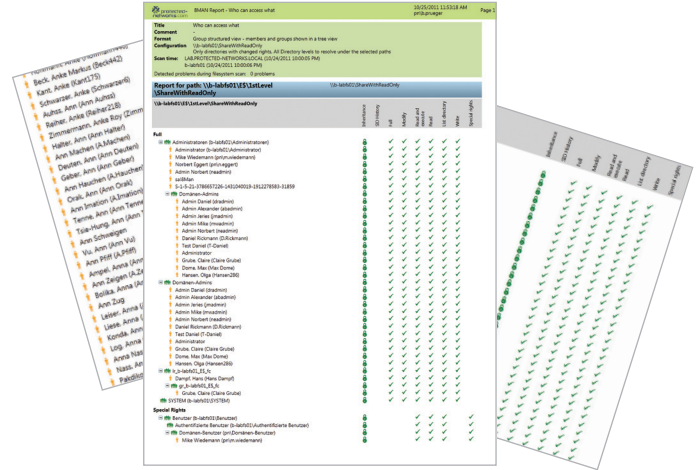

The visualisation of objects within file server, Active Directory and SharePoint environments highlights discrepancies immediately and allows for quick and easy optimisation. This is especially valuable in creating awareness of IT security issues beyond the IT department and allows non-technical roles to help ensure the security of sensitive company data.

8MAN includes a variety of preconfigured reports, which are constantly developed in close cooperation with our customers. Our comprehensive reporting suite allows administrators, managers and heads of departments to easily understand existing access rights.

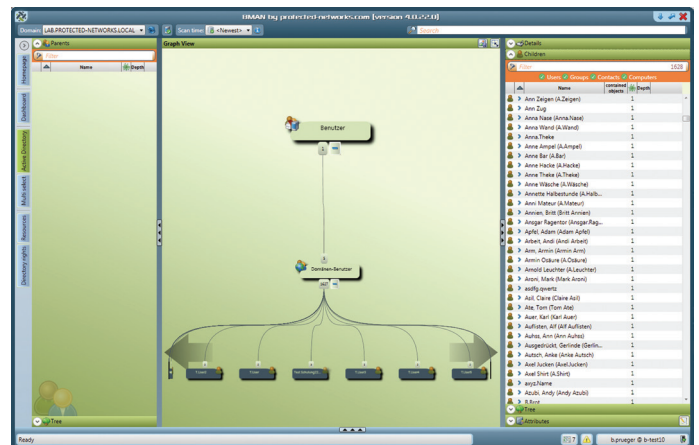

It is now possible to delegate some responsibilities to heads of departments and data owners, thereby reducing the workload of IT administrators while improving the quality of access rights decisions. 8MAN also allows for the continued management of access rights, even in outsourcing situations.

8MAN can provide invaluable support in IdM projects by delivering dependable and accurate information regarding the actual access rights situation. It allows you to effectively test the gap between what is and what should be.

8MAN functions as an important building block in the certification of legal and regulatory compliance standards such as PCI DSS, ISO 27001 and SOX.

Easy to understand reports for management and operating departments

All permissions in AD, File Server and SharePoint at a glance

ADVANTAGES AT A GLANCE

SECURITY	RESPONSIBILITY	TRANSPARENCY	EFFICIENCY
<p>Visualise access rights Identify and administrate incorrect access rights immediately.</p>	<p>Automate reporting Communicate actual access rights to affected parties.</p>	<p>Enable compliance Use 8MAN as a foundation for compliance and legal responsibilities. (ISO 27001, PCI-DSS, SOX, etc.).</p>	<p>Administrate efficiently Improve speed and accuracy of reporting and administration, resulting in tangible time and cost savings.</p>
<p>Minimize risk Protect sensitive data by limiting access to a "need to know" basis.</p>	<p>Incorporate Data Owners Delegate responsibilities and processes to helpdesk and individual departments.</p>	<p>Document changes 8MAN requires all changes to be commented and logged.</p>	<p>Provision access rights Assign access rights flexibly via role based templates; even limit them temporarily.</p>
